Encryption cuts the chance of a costly breach

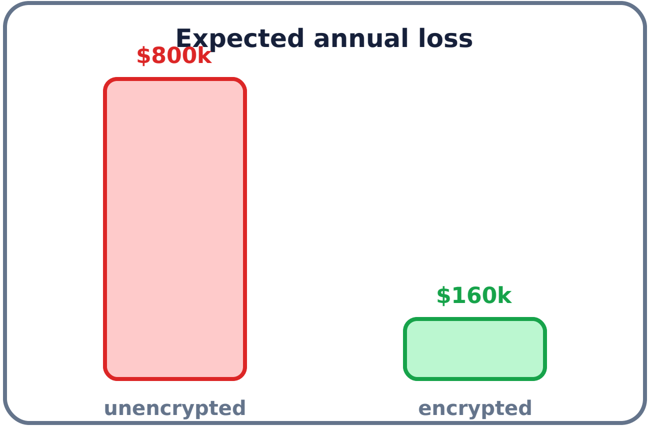
Given

P(breach | unencrypted)	**0.40**
P(breach | encrypted)	**0.08**
Loss per breach (ALE)	**$2,000,000**

Risk = probability x loss

Unencrypted: 0.40 x 2,000,000 = $800,000

Encrypted: 0.08 x 2,000,000 = $160,000



Risk reduction = $640,000 saved per year
